

**The biggest challenge on our planet is providing people with access to clean drinking water.**

Lots of fresh water deposits contain disease-inducing substances, such as viruses, bacteria or chemicals. A fact that has profound consequences for the health of those people involved.

Trunz Water Systems has converted the vision of a simple self-sufficient water treatment system into practice. The compact, mobile water treatment and desalination systems are powered using integrated photovoltaics and wind generators. This means that there are virtually no boundaries to using this system anywhere in the world.

**20% MORE EFFICIENCY**

**Solar Power Center**
