

**COLENERGY
NEW PARTNER OF TRUNZ WATER SYSTEMS IN COLOMBIA**

The Swiss based company Trunz Water Systems develops manufactures and distributes sustainable and cost effective solutions for water purification and desalination as well as solar power centres: complete and ready-to-operate units which are mobile and independent - thanks to renewable energy. The innovative company offers sustainable solutions for the decentralised potable water and electricity supply in remote areas. The units are exceptionally energy efficient, independent, compact and environmentally friendly.

Up to now, over 950 Trunz Water Systems are already operating in more than 36 countries all over the world. All of the water treatment systems are low maintenance and easy to install. The capacity depends on the raw water nature and quality that ranges from 240 to 120'000 litres a day.
